

Complete each of the following texts with the words given. Then choose a title for each text from the proposed list.

The titles: Hardware – Search engine – Keyboard – Browser.

Text 1:

Words: web – software – Firefox – browser – Microsoft

.....

In the metaphor borrowed from the marine domain, the navigator is like a boat moving in the ocean of information. This is the which you use to display the pages that you visit. Among the known browsers, we will cite Internet Explorer, Mozilla, Konqueror, Opera, Safari...

Text 2:

Words: sites – functionalities – designers – Google – query – tool – relevance – machine

.....

It's a which has become democratized with the Internet. In a way, it's your gateway to the Internet, an almost obligatory step to finding information. Unlike a directory (see Directory) a search engine is a (a set of machines) which establishes results following a query (query entered in the appropriate field). The results are listed in order of according to more or less secret criteria developed by its An engine is a machine incapable of understanding the meaning of your (at least until today) nor to resolve ambiguities, if any. It is therefore up to you to put yourself at their level by using the of advanced search, Boolean operators, punctuation.

An engine is meant to be exhaustive. However, there is a whole part of the Internet (the invisible web, or 45% of Internet) which is not referenced in the engines. The best known engine is undoubtedly We will also mention Yahoo! (originally, a directory), Voila, Live, Free ...
