

## ***Unit 4 : Active and Passive Voice***

### **1. What is Active and Passive Voice ?**

#### **Active Voice:**

In active sentences, the subject performs the action.

Example: The engineer programs the robot.

(The subject "**engineer**" performs the action of programming.)

#### **Passive Voice:**

In passive sentences, the subject receives the action.

Example: The robot is programmed by the engineer.

(The subject "**robot**" is the receiver of the action.)

### **2. Why Use Passive Voice?**

➡ To focus on the action or result rather than the doer:

Example: The circuit was tested.

(The emphasis is on the action of testing, not who performed it.)

➡ To emphasize the object of the action:

Example: The sensor was calibrated by the technician.

(Focus is on the sensor, which was calibrated.)

➡ When the doer is unknown or not important:

Example: Data is processed automatically.

(The focus is on the process itself, not who processes the data.)

### **3. How to Form Passive Voice?**

Formula:

1. **Identify the object** in the active sentence.
2. Make the object the **subject** of the passive sentence.
3. Use the verb **to be** in the same tense as the active sentence.
4. Add the **past participle** of the main verb.
5. Optionally, add **by + doer** if necessary.

Example:

**Active:** *The robot moves the arm.*

- Object: **the arm** → becomes the subject in passive.
- Tense: Present simple → use **is** (form of "to be").
- Main verb: **moves** → becomes **moved** (past participle).

**Passive:** *The arm is moved by the robot.*

#### 4. Verb Forms for Passive Voice

| Tense              | Active Sentence                                                                            | Passive Sentence                                                                                            |
|--------------------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| Present Simple     | *The controller <b>sends</b> signals<br>*The software <b>controls</b> the process.         | *Signals <b>are sent by</b> the controller<br>*The process <b>is controlled</b> by the software.            |
| Past Simple        | *The engineer <b>calibrated</b> the sensor<br>*The technician <b>repaired</b> the circuit. | *The sensor <b>was calibrated by</b> the engineer<br>*The circuit <b>was repaired</b> by the technician.    |
| Future Simple      | *The robot <b>will check</b> the parameters<br>*The robot <b>will optimize</b> the system  | *The parameters <b>will be checked by</b> the robot<br>*The system <b>will be optimized</b> by the robot    |
| Present Continuous | *The PLC <b>is controlling</b> the process<br>*The machine <b>is assembling</b> the parts. | *The process <b>is being controlled by</b> the PLC<br>*The parts <b>are being assembled</b> by the machine. |
| Present Perfect    | *The team <b>has updated</b> the firmware<br>* The algorithm <b>has detected</b> a fault   | *The firmware <b>has been updated by</b> the team<br>*A fault <b>has been detected</b> by the algorithm     |

#### 5. When to Avoid Passive Voice

##### 1. When clarity about the doer is important:

**Active :** The engineer fixed the problem.

(This is more precise than "The problem was fixed.")

##### 2. In informal or conversational English:

**Active:** The robot picked up the object.

(This is more natural than "The object was picked up by the robot.")

## 6. Notes for Automation Context

In technical fields like automation, the **passive voice** is often used in reports, manuals, and documentation to focus on processes and results.

For example:

- The signal is transmitted to the controller.
- The motor parameters were adjusted.

This style ensures that the emphasis remains on the technology and its operation rather than the person performing the action.
